

TASK: 1

On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

Steps to complete the task on Windows

1. Press **Windows + R** on your keyboard.
2. Type **msinfo32** and press **Enter**.
3. The **System Information** window will open.
4. Make sure **System Summary** is selected on the left.
5. Find these details:
 - **OS Name / Version** – shows your Windows version.
 - **Processor** – shows your CPU model.
 - **Installed Physical Memory (RAM)** – shows your RAM capacity.
6. Take a screenshot using **Windows + Shift + S**.
7. Select the area containing these three details and save the screenshot.

For my HP i3 intel the screenshot might look like:

Detail	Example
OS Name	Microsoft Windows 11 Home
Version	10.0.26200 Build 26200
Processor	Intel(R) Core(TM) i3-xxxx
Installed Physical Memory (RAM)	8.00 GB

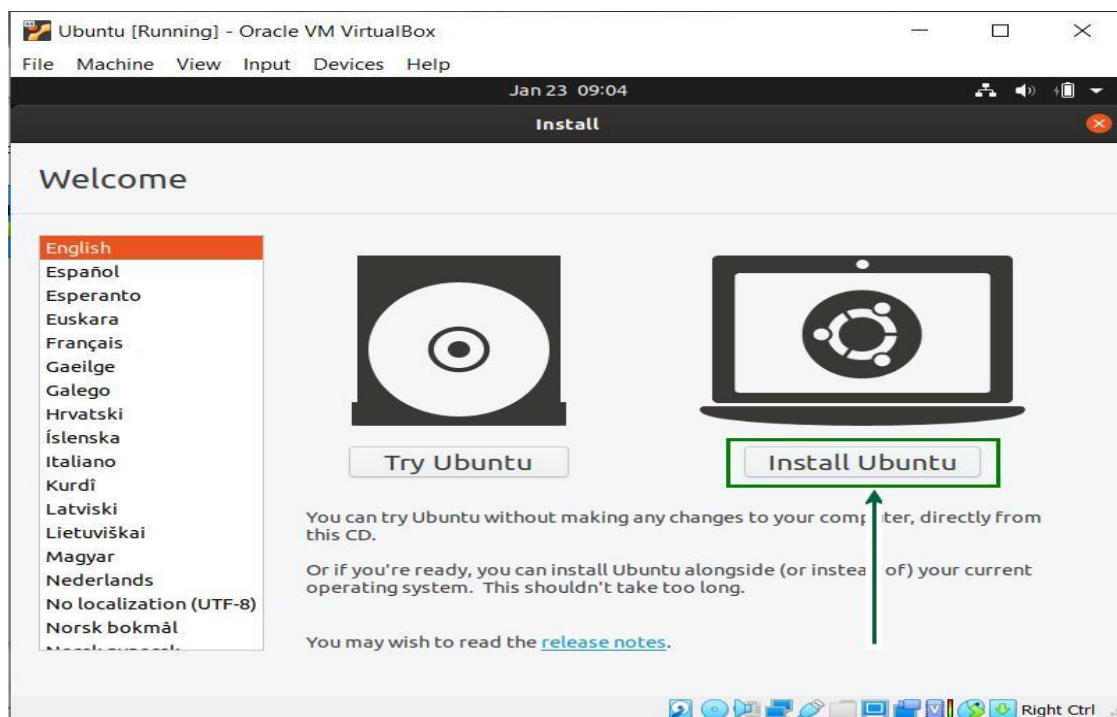

TASK: 2

Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or BalenaEtcher to create a bootable USB drive for installation.

Hint: If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually.

Use VirtualBox without a USB

1. Download the official Linux ISO.
2. Install **VirtualBox**.
3. Open VirtualBox and select **New**.
4. Enter a name such as **Ubuntu Linux**.
5. Select the downloaded ISO as the installation image.
6. Allocate suitable RAM and virtual storage.
7. Click **Start**.
8. The Linux installer will boot from the ISO.
9. Follow the installation instructions inside the virtual machine.

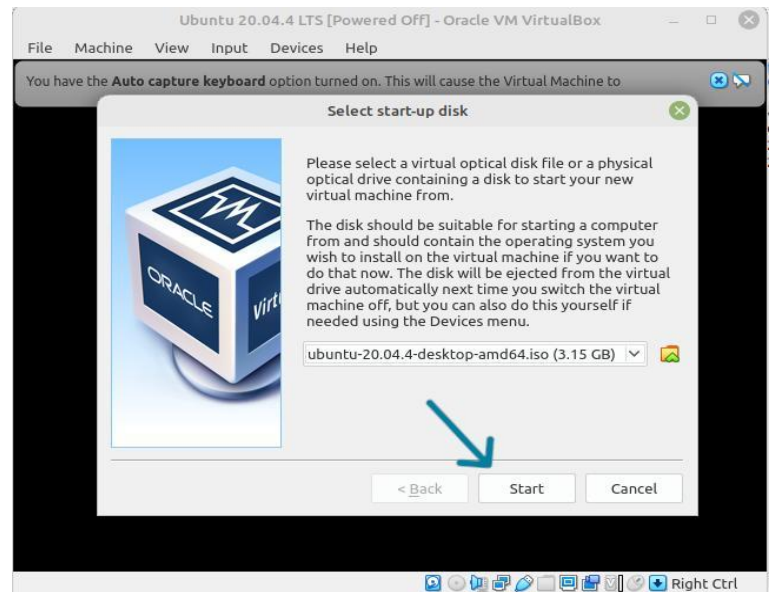

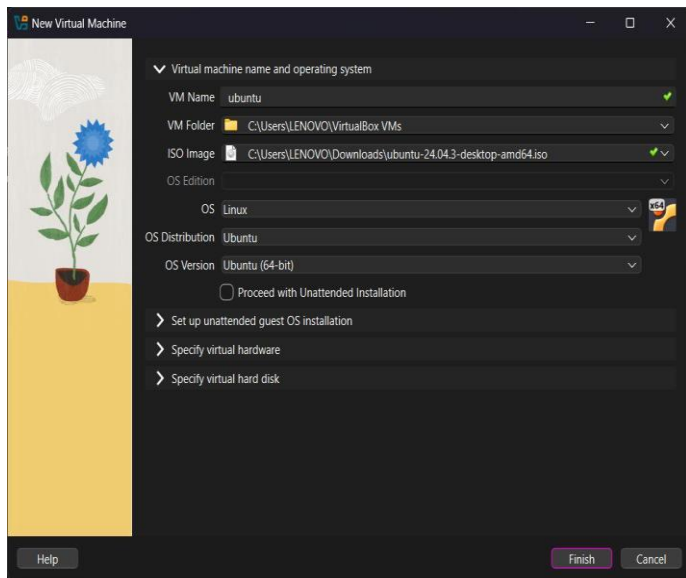

Figure: A Linux distribution ISO was downloaded and used with Rufus to create a bootable USB drive. The bootable media was successfully prepared for Linux installation.

TASK: 3

On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

Hint: Find 'Language & Region' in System Preferences to add or change languages.

1. Change the Desktop Wallpaper

1. Open **System Settings** from the Apple  menu.
2. Select **Wallpaper**.
3. Choose any available Apple wallpaper or click **Add Photo** to select your own image.
4. The desktop wallpaper will change immediately.
5. Take a screenshot showing the new wallpaper.

2. Change the System Language to Hindi or Gujarati

1. Open **System Settings**.
2. Go to **General** → **Language & Region**.
3. Under **Preferred Languages**, click +.
4. Search for **Hindi** or **Gujarati**.
5. Select the language and click **Add**.
6. If macOS asks whether you want to use it as the primary language, select **Use Hindi** or **Use Gujarati**.
7. Log out or restart if macOS asks you to do so.
8. Take a screenshot showing **Language & Region** with the selected language.

TASK: 4

Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

1. Install Ubuntu

1. Download an official Ubuntu ISO.
2. Open **VirtualBox** → **New**.
3. Name the virtual machine **Ubuntu**.
4. Select the downloaded Ubuntu ISO.
5. Allocate around **4 GB RAM** and **25 GB or more virtual storage**.
6. Start the virtual machine and follow the Ubuntu installation wizard.
7. When asked to create a user, you can create a temporary administrator account, such as `ubuntuadmin`.

2. Create the `gamer` User

After Ubuntu starts, open **Terminal** and run:

Enter a password when prompted and complete the optional information.

If you want `gamer` to have administrator privileges:

3. Enable Automatic Login

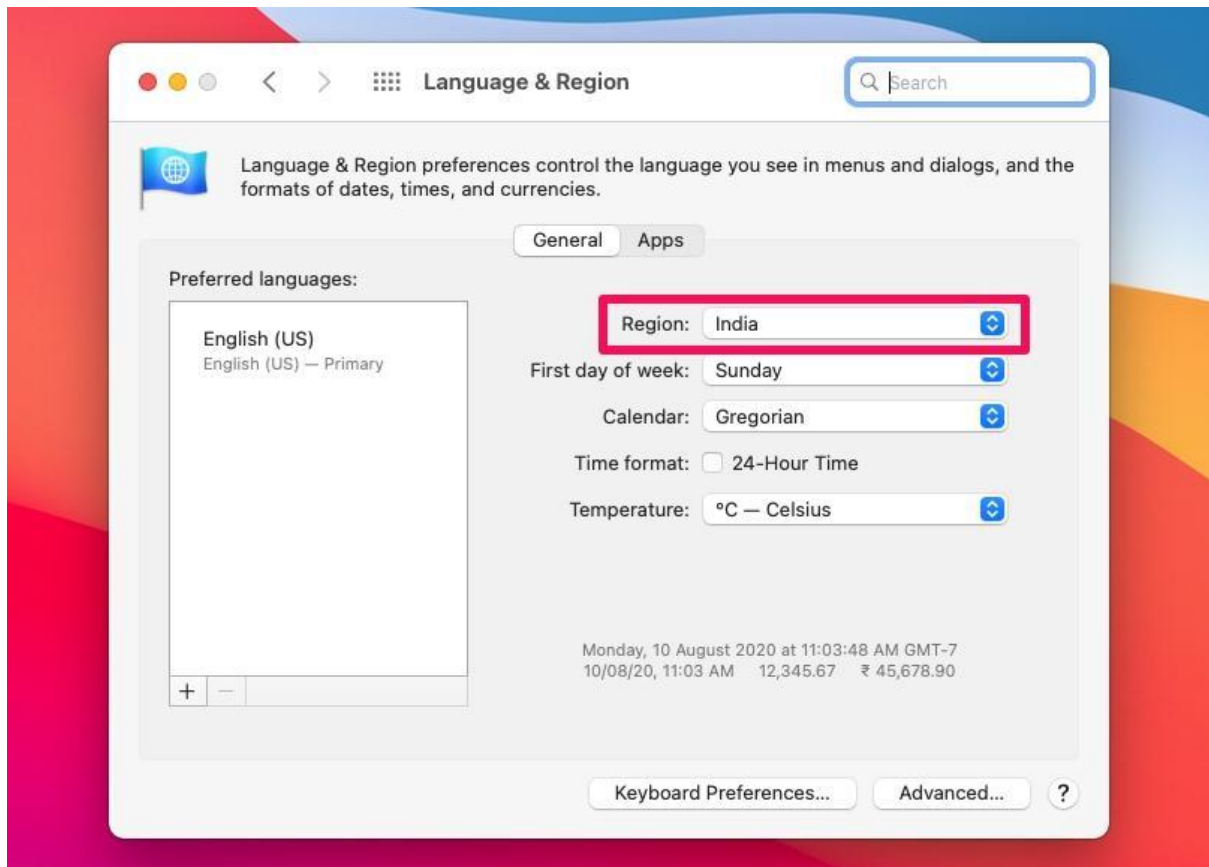

On Ubuntu's graphical interface:

1. Open **Settings**.
2. Select **System** → **Users**.
3. Click **Unlock** and enter your administrator password.
4. Select the **gamer** account.
5. Turn on **Automatic Login**.
6. Restart the computer.

After restarting, Ubuntu should automatically log in as **gamer**.

4. Take the Screenshot

For the assignment, take a screenshot showing the **Ubuntu login/user screen** with **gamer** visible.

TASK: 5

Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.

Part 1: Create a Bootable USB

1. Download the **Windows 10 Media Creation Tool** from Microsoft's official website.
2. Insert the USB drive.
3. Run the Media Creation Tool.
4. Select **Create installation media (USB flash drive)**.
5. Choose:
 - Language: Your preferred language
 - Edition: Windows 10
 - Architecture: 64-bit
6. Select the USB drive and let the tool create the bootable media.

Part 2: Boot from USB

1. Insert the bootable USB into the laptop.
2. Restart the laptop.
3. Press the boot menu key:
 - HP: Esc or F9
 - Dell: F12
 - Lenovo: F12 or Fn + F12
 - ASUS: Esc
4. Select the USB drive from the boot menu.

Part 3: Start Windows Installation

1. The Windows Setup screen appears.
2. Select:
 - Language

- Time and Currency Format
- Keyboard Layout
- 3. Click **Next → Install Now**.
- 4. Enter a product key or select **I don't have a product key**.

Part 4: Choose Installation Type

Select:

Custom: Install Windows only (Advanced)

This option allows partition management.

Part 5: Partitioning Tips

For a New Empty Drive

Example for a 512 GB SSD:

Partition	Suggested Size	Purpose
C: Drive	150–200 GB	Windows and software
D: Drive	Remaining space	Personal files

Windows will automatically create:

- EFI System Partition
- Recovery Partition
- MSR Partition

For an Existing Drive

- Back up important files first.
- Delete only the partitions you want to remove.
- Do not delete recovery partitions unless necessary.

SSD Recommendations

- Keep at least **15–20% free space**.

- Use GPT partition style with UEFI boot mode.
- Avoid creating too many small partitions.

Part 6: Install Windows

1. Select the partition for Windows installation.
2. Click **Next**.
3. Windows will copy files and restart several times.
4. Remove the USB drive after the first restart if required.

Part 7: Initial Setup (OOBE)

Choose:

- Region
- Keyboard layout
- Wi-Fi connection

Sign in using:

- Microsoft Account, or
- Offline account

Part 8: Privacy Settings

Recommended settings:

Setting	Recommendation
Location	Off (if not needed)
Diagnostic Data	Basic/Required only
Find My Device	Optional
Advertising ID	Off
Inking & Typing Data	Off

Setting

Recommendation

Tailored Experiences Off

Choose according to your personal preferences.

Part 9: Post-Installation Updates

1. Open:

Settings → Update & Security → Windows Update

2. Click:

Check for Updates

Install:

- Security updates
- Device drivers
- Optional updates

Restart if prompted.

Part 10: Install Essential Drivers

Check:

Device Manager

Install drivers for:

- Graphics
- Wi-Fi
- Audio
- Bluetooth
- Touchpad

Download drivers from your laptop manufacturer's website if needed.

Part 11: Recommended Software

Install:

- Web browser
- Office software
- PDF reader
- Antivirus (Windows Security is usually sufficient)
- Media player

Steps That May Be Unclear or Missing

During a real installation, users may find these points confusing:

1. **UEFI vs Legacy Boot Mode**
 - Modern systems should use UEFI with GPT.
2. **Partition Selection**
 - Users may accidentally delete important partitions.
3. **Driver Installation**
 - Some laptops need Wi-Fi drivers after installation.
4. **Activation**
 - A product key or digital license may be required.
5. **Secure Boot and TPM**
 - Usually not required for Windows 10 but may affect booting.
6. **Backup Importance**
 - This should always be emphasized before formatting a drive.
