

HARDWARE

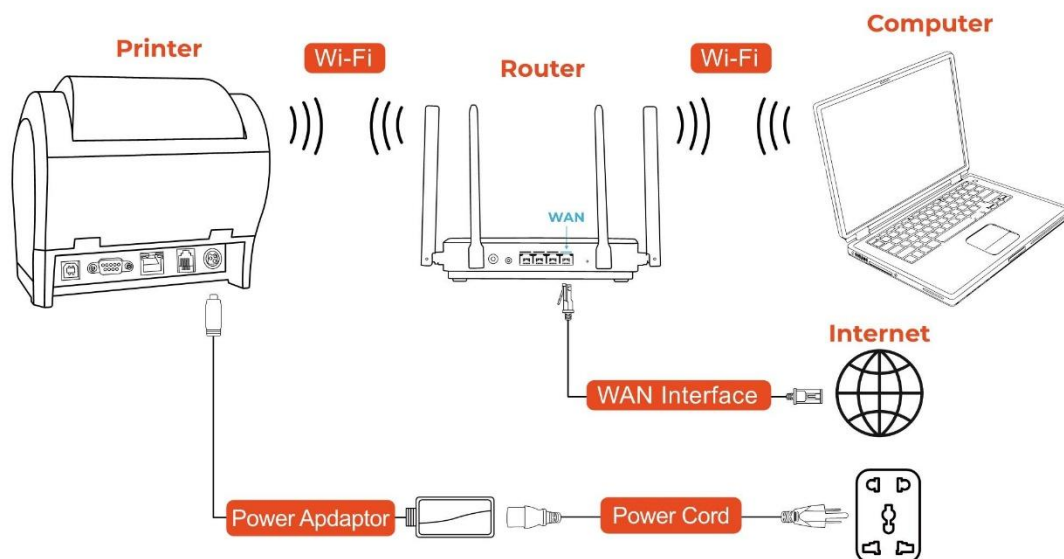

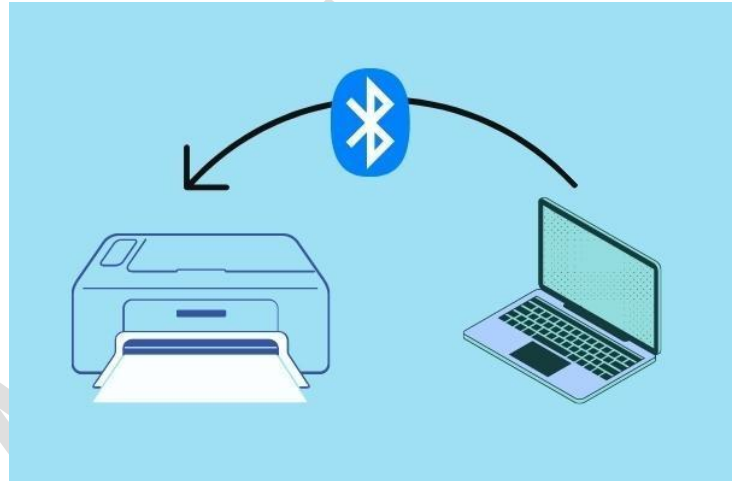

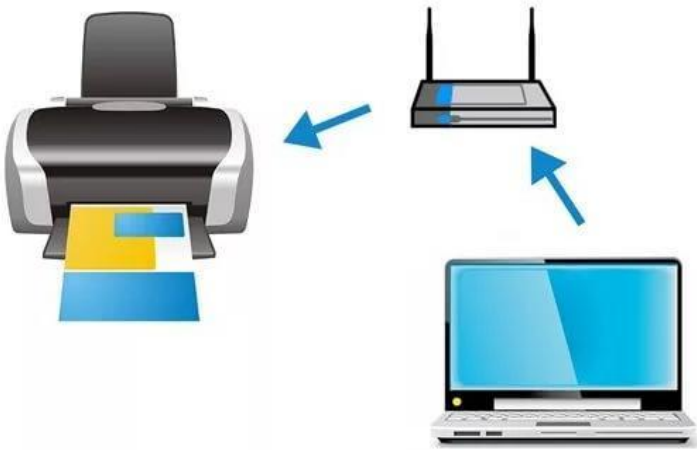

TASK: 1

Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments').

Category	Type	Real-Life Use Case
Printer	Inkjet Printer	Printing college assignments and photos at home
Printer	Laser Printer	Printing large volumes of office documents quickly
Printer	Dot Matrix Printer	Printing invoices and receipts with carbon copies in warehouses
Scanner	Flatbed Scanner	Scanning photographs and important documents for digital storage
Scanner	Handheld Scanner	Scanning barcodes and inventory items in a retail store
Webcam	Built-in Webcam	Attending online classes or video meetings on a laptop
Webcam	External USB Webcam	Live streaming or participating in high-quality video conferences

TASK: 2

Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).

TASK: 3

List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.

Hint:
Think about speed, convenience, and compatibility.

Connection Interface	Advantage	Disadvantage
USB (Universal Serial Bus)	Fast and stable data transfer; easy plug-and-play connection	Requires physical cable; limited mobility
Wi-Fi (Wireless Network)	Allows wireless printing/scanning from anywhere within network range	Can be slower than wired connections and depends on network stability
Bluetooth	No cables needed; easy to connect for short-range devices	Limited range and slower data transfer compared to USB

TASK: 4

Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

Device Chosen: Wi-Fi Printer

Steps to Connect a Wi-Fi Printer to a Computer:

1. **Unbox and Power On the Printer**
First, take the printer out of the box, connect it to a power source, and turn it on. Make sure the printer is properly set up with paper and ink.
2. **Connect Printer to Wi-Fi Network**
Use the printer's control panel (display screen) to open the settings menu. Select **Wi-Fi Setup** or **Network Settings**, choose your home/college Wi-Fi network, and enter the password.
3. **Turn On Wi-Fi on Your Computer**
Ensure that your laptop or PC is connected to the same Wi-Fi network as the printer.
4. **Add Printer on Your Computer**
 - On Windows: Go to **Settings** → **Devices** → **Printers & Scanners** → **Add a Printer**
 - On Mac: Go to **System Settings** → **Printers & Scanners** → **Add Printer**
5. **Select Your Printer**
Your computer will search for nearby devices. Select your printer name from the list and click **Add Device**.
6. **Install Drivers (if required)**
If the printer driver is not already installed, your computer may automatically download it. If not, download it from the printer manufacturer's website.
7. **Print a Test Page**
Once installed, print a test page to check if the printer is working correctly.
